

Actuarial Senior Analyst, Actuarial Executive Development Program

As a member of The Cigna Group's Actuarial Executive Development Program (AEDP), you will take your analytical and technical skills and put them to work in a business setting, making a difference for millions across the globe!

The AEDP develops actuaries into business leaders. You will develop through rotational opportunities in core actuarial areas such as pricing, reserving, forecasting, and risk management. Additionally, you may also explore opportunities in areas such as data science, analytics, investment management, operations, and underwriting. A typical experience consists of 3-4 rotations, lasting 18-24 months, totaling a full program length of 5-7 years. After graduating from the program, you can continue to rotate throughout the organization in different roles to further grow your career.

Your first rotation might be...in our US Commercial business, where you would analyze medical pricing methodology, set reserves levels, or serve as the market pricing lead for our dental, pharmacy, or stop loss products... Or you could work in our pharmacy economics department, where you would analyze pharmacy costs and utilization metrics to drive savings for our clients and customers. These are just a few examples of the wide variety of opportunities The Cigna Group offers in both traditional and non-traditional actuarial roles.

While your career path is ultimately in your own hands, the AEDP will help guide you along your journey. The AEDP has a dedicated program team, including two credentialed FSAs, that work with associates to help identify job and professional development opportunities, support your attainment of your Fellowship in the Society of Actuaries, and provide you with unique leadership experiences.

As a program associate, you will join a large, welcoming community of actuaries who are readily available to teach and mentor you. Our community — from senior executives to current associates — are committed to providing one-on-one career advice and having discussions about their roles and experience in the health services industry.

The AEDP Advantage:

Our People: Diverse and inclusive community of associates and program alumni focused on mentorship, professional development, exam support, and connecting as a community

Exam Support: Exam fees, study materials, paid study time, and exam raises

Long-Term Career Development: Mentorship and professional development opportunities

What you need to do the job:

- A bachelor's degree in actuarial science, data analytics, economics, finance, math, statistics or related major; or equivalent work experience
- 3.2 minimum GPA
- 0-4 years professional work experience within this job profile
- Successfully completed at least one SOA examination
- Outstanding technical, analytical, and interpersonal skills
- Excellent verbal and written communication skills
- Possession of a strong desire and demonstrated ability to lead
- Drive to develop business and actuarial skills through ongoing training and varied rotations

Additional Information:

Work Authorization: This position is open only to individuals who are eligible for employment in the United States and who would not require visa sponsorship now or in the future.

Compensation: Highly competitive compensation and benefit packages that reward both work performance and passing of exams

Locations: First rotation AEDP Associates must live/relocate to one of Cigna's major office locations: Bloomfield, CT; Denver, CO; Philadelphia, PA; and Nashville, TN.

Hybrid workplace: A collaborative on-site work environment with the flexibility to work remotely 1-2 days per week. All associates are encouraged to come into the office regularly for collaboration, connection and networking opportunities.
